Subject: Re: WIVT Question

Peter -- Here are the responses to your questions:

At this point, has all of the testing been completed? If not, what else needs to be done.

EPA response: To provide certainty to residents and ensure a thorough and accurate analysis, EPA will resample the four wells where previous Cabot and state data showed levels of contaminants that pose a health concern but where EPA's initial round of sampling data did not detect levels that would require action. EPA is also sampling three other homes where homeowners expressed interest in initial sampling, but did not schedule sampling when earlier sampling was conducted.

Is the EPA still delivering water to 3 or 4 families?

EPA Response: EPA will continue to provide drinking water while the Agency resamples these wells.

Also, when does the EPA expect to have its fully analysis and report of the Dimock area completed and released by?

EPA response: Once all of the sample results are complete, we will conduct a comprehensive review to determine if there are any trends or patterns in the data as it relates to home well water quality. Our actions will continue to be based on the best available science and legal authorities.

Subject: WIVT Question

Roy,

I wanted to check in about the EPA water well testing in Dimock. At this point, has all of the testing been completed? If not, what else needs to be done.

Is the EPA still delivering water to 3 or 4 families?

Also, when does the EPA expect to have its fully analysis and report of the Dimock area completed and released by?

Thank you,

Peter Quinn
